esting and valuable. Because of her unusual ability as a teacher she had been assigned a class of backward children; children who were dull and stupid and whom it seemed it would be impossible to ever teach anything to.

For weeks she struggled with her class, seemingly making little if any progress. But she had infinite patience and a wealth of human sympathy. Finally those little tots who for weeks had apparently comprehended nothing began to show signs of understanding. First one and then another would grasp the idea she was trying to teach them.

Why was this? I think my teacher solved the problem when she said that these little children were not really stupid, but they were just frightened. They had been brought up in homes where they were continually made to fear everything. Many of them had been treated not only unkindly but cruelly by ignorant, brutal parents until their little brains had become dulled and their intellects stunted from living in such an atmosphere of fright and cruelty.

Pathetic, isn't it, to think that hundreds and thousands of little children are forced to spend their lives in such environments. But isn't it splendid to think of the advantages of the public schools for such children, and the good that is done them by such tireless, sympathetic and loyal teachers as my kindergarten friend. And she is but of thousands like her throughout the country. I wonder if we really appreciate the noble teachers of our land as we should!

How To Prepare Soups For Children --- By Sister Mary

Youngsters of "primary" age must ave nourishing, easily digested

noon-time luncheons. Of all foods soup answers these requirements. But the same soup day after day soon fails to attract. Children love change and variety, and a varied balanced ration or diet is considered superior to one of deadly monotony for a healthy growing

Unusual nervous strain during the morning school hours often "takes" the appetite. If a child must be forced to eat, the food does little good, but if the appetite is coaxed a bit and responds naturally, the tension relaxes and the child eats

with a relish.

Toasted bread sticks of whole wheat bread are excellent to serve with either cream or stock soup. They provide more nourishment than wafers and the crispness of the toat is more wholesome than the softness of plain bread. These soups may help vary the

The nourishment of the soup de-pends on the "stock." This may be of milk or meat. However, the term 'stock' always means meat broth. Stock can be made from the bones

of rarely cooked meats. This is known as second stock and does not contain the nourishment found in stock made with fresh meat and A highly seasoned dinner soup served to stimulate the appe-tite rather than to provide any amount of nourishment might well be made of these left-overs.

Brown Stock
Either the "plate" or shin of beef
used for making stock. The plate is cheaper, contains more fat and less bone. The shin of beef ordinarily weighs from four to six pounds, without the bone. There is no fat except the marrow in the bone.

Four pounds meat (fat, lean and one), 8 cups water, 2 teaspoons, salt 1-2 teaspoon pepper, 2 small onions, 3 coarse outer blades of celery with

ready to prepare for serving. The fat seals and tends to keep the stock. This stock is less highly seasoned and is not cleared as stock for dinner purposes usually is.

Tomato Soup

Two cups canned tomatoes, 2 cups stock, 6 whole cloves, 1-2 teaspoon salt, few grains pepper.
Simmer tomatoes and cloves in a covered kettle for 15 minutes. Strain and add stock, salt and pepper. Heat

to the boiling point and serve. Serve with tiny cubes of bread toasted on all four sides. Food for children should be sea

soned enough to be palatable but should not be highly flavored.

Rice Soup

Four tablespoons brown rice, 2 cups stock, 1 cup tomato juice, salt

ing water. Heat stock and tomato juice and when boiling add rice, salt and pepper. Simmer for 30 or 40 minutes, until rice is tender.

The stock used in making a soup that will be of the necessary nutriment for children must be rich and strong. Otherwise a stock soup is mainly a dissolvent food. A soup made with milk is a pro-

tein food as well as a liquid, When this kind of soup forms part of the luncheon the rest of the meal should be made up of minerals. Fresh fruit and vegetables rich in iron will round out the meal. Copyright, 1923, NEA Service. Inc.
